

CASE HISTORY

FTM Bunded 1000 litre Oil Stands

November 2006

Herman Prinsloo

Fluid Transfer Management was approached to design a number of 1000 litre bunded oil stands which could be used in temporary workshops at remote mine sites.

FTM rose to the challenge, designing and manufacturing the bunded oil pods to meet the customer's strict requirements.

The criteria we had to meet were as follows:

- The oil pod stand had to be strong enough to hold a full 1000 litre oil pod.
- Bunded to contain minor spillages.
- Equipped with lubrication dispensing and filtration equipment and set up to allow for handling using fork lifts.
- The lubricating dispensing equipment installed consists of a pneumatic 3:1 oil pump and a double pedestal 1/2" Spring Rewind oil hose reel. The filtration equipment was matched to the customer's specification.

After completion of the assembly and rigorous testing, the bunded oil pod stands were despatched to a very impressed and satisfied customer.
