

## Centralise your Vehicle's Fluid Systems

Fluid Transfer Management's Service Box brings your vehicle's refilling, evacuation and sampling points together in a single location. With a heavy gauge steel housing equipped with premium quality fittings, the FTM Service Box brings safety and ease of serviceability to your whole fleet. Even if your fleet comprises different makes and models, your fluid management remains consistent, improving productivity and reducing human error.

With abrasion resistant powder-coated finish in a range of colour options, the FTM Service Box is robust, dust-resistant and lockable for extra security.

Refilling fittings are colour coded and uniquely dimensioned, eliminating the danger of misconnection. All fittings are flush-faced to keep out contaminants.

Return line live sampling points are included for select fluids if required.

## Custom Built to Your Specifications

Mounting brackets can be supplied to suit your particular requirements.

Complete units can be manufactured to your specifications and delivered promptly.

To order your FTM Service Box or request a quotation, simply complete the Specification Sheet overleaf and fax to +61 8 9458 2999.
